

THE PREVENA™ SYSTEM MANAGES SURGICAL INCISIONS BY:

Helping to
hold incision
edges together

Removing
fluids and
infectious
materials

Acting as a
barrier to external
contamination

Delivering
continuous
negative pressure
at -125mmHg
up to 7 days

INCISIONS CAN BE COMPLICATED AND COSTLY

Post-surgical complications can lead to significant costs:

8MILLION

people are at risk for
healthcare-associated
infections (HAIs)²

SSIs are
21.8%
of all HAIs³

SSIs

Infections
increase

average length of hospital
stay to an extra

9.58 days⁴

An additional **9.58** day
hospital stay costs

\$38,656⁴

Beyond SSIs, other common complications include:
dehiscence, hematoma, and seroma formation⁵⁻⁷

A number of published clinical studies in a variety of surgical incisions and patient populations have demonstrated that the PREVENA™ System is associated with positive clinical outcomes compared to standard post-operative dressings.¹

SUMMARY

The PREVENA™ System incorporates all of the functional elements of NPT necessary for the management of a variety of closed surgical incisions. Our portfolio of portable and flexible dressings and therapy units provide combined benefits of ease of use and flexibility to manage and protect surgical incisions following primary closure.

Optimized for patient safety:

- Visual and audible alarms
- Interface layer contains 0.019% ionic silver that may help reduce bacterial colonization within the interface fabric. The silver is not intended to treat infection.
- Replaceable canister holds exudate away from the incision site
